# GlobaLeaks:
Transparency, Accountability and Openness at it's best.

GlobaLeaks strives to increase accountability and transparency in our society. When information that affects the public remains hidden, democracy and economies cease to function properly.

When the government is not transparent and accountable for their actions, public should obtain it autonomously. Thanks to anonymity technologies it is possible to create a distributed network of sites that enforce transparency and openness at any level.

It is called "GlobaLeaks".

1. The whistleblower has information he would like to share with the world

2. Every GlobaLeaks Node keeps an up to date knowledge base on how to securly submit data.

3. Following the guidelines from step 2, he uses a secure method to connect to the site (ie. Tor).

4. The Node Admin keeps a list of targets that are pertinent to that particular site.

5. The node notifies the targets of the material and they are able to access it with censorship preventing technologies.

6. The Target receives the notification of the data

7. The Target follow the instructions to download and view the submission.

8. The Node Admin promotes whistleblowing in his community.

What is GlobaLeaks?

GlobaLeaks is the first open-source whistleblowing framework. It empowers anyone to easily set up and maintain a whistleblowing platform. GlobaLeaks can help many different types of users: media organizations, activist groups, corporations and public agencies.
